PROBLEM STATEMENT #33

Retail, E-Commerce & Finance

Micro-Lending & Peer Credit Risk Assessor

A peer-to-peer micro-finance platform calculating borrower risk scores using heuristic rules, generating structured repayment schedules, and triggering automated default warnings.

Use-Case Flow Specification

Use Case: Submit Loan Request

Use Case ID: UC-01

Primary Actor: Borrower

Supporting Actor: Peer Lender

Preconditions

1. The Borrower has an account on the platform and is logged in.
2. The Borrower has provided all the requested financial and employment information.
3. The Borrower does not have an incomplete loan request being processed at the moment.
4. The platform is up and running.

Postconditions

1. The loan request will be stored successfully.

2. The Borrower will have a corresponding credit risk rating determined for the submitted loan request.
3. The loan request will be published for the Peer Lenders.
4. A repayment schedule will become available after the payment has been made.

Main Success Scenario

1. The Borrower goes to his profile and clicks the “Submit Loan Request” button.
2. The system provides the Borrower with a form asking to fill in the necessary loan details.
3. The Borrower fills in the requested loan information and submits the form.
4. The system validates the provided loan details and checks if all required information has been entered.
5. The system analyzes the Borrower’s financial profile and determines his credit risk level based on the provided income/debt repayment history, employment profile, number of outstanding loans/debts, and other relevant information.
6. The system assesses the Borrower’s credit risk level and determines his risk rating (Low/Average/High).
7. The system saves the submitted loan application along with the determined risk rating in the database.
8. The system notifies the Borrower that his loan application has been successfully submitted.
9. The submitted loan request becomes visible to the Peer Lenders for screening.
10. The process is complete.

Alternate Flow

4a. Incomplete/Invalid Loan Details

1. The system identifies that the Borrower has missed to enter some of the required information or has entered it incorrectly.
2. The system highlights the fields where the Borrower has entered incorrect data or left empty fields.
3. The Borrower updates the corresponding fields and hits the submit button again.
4. The system validates the provided data once again.
5. If the system finds the provided data as valid, it proceeds to step 5 of the Main Success Scenario.
6. If the Borrower fails to provide updated information, the system rejects the application and exits the use case.
